[University Physics](#) Ronald Lane Reese 2000 Reese writes a text that embraces the spirit of many reform goals, such as better integration of modern physics topics, a stronger emphasis on conceptual understanding, and an attention to different learning styles. Most importantly, however, Reese writes for students to allow them not only to learn the tools that physics provides, but also to see why those tools work and the beauty of the ideas that underlie them. Because students sometimes fail to see how the topics of physics connect to each other or to the world outside the classroom, Reese introduces each new topic by describing how it relates to experiences and phenomena with which the student is already familiar or to topics previously discussed. Reese emphasizes introductory physics, rather than encyclopedic physics, leaving appropriate topics for more advanced courses. His thinking is that it is better to build technical knowledge on a firm foundation of fundamental principles rather than on a large collection of mere formulas. In doing this, he helps students develop a thorough understanding of the principles of basic areas of physics: kinematics, dynamics, waves, thermodynamics, electromagnetism, optics, relativity, and modern physics. Because most students cannot discern simplifying patterns and connections when faced with seemingly complex ideas, students learn physics through practice. To assist them, Reese integrates the most significant material from previous chapters into new material; provides an accurate conceptual understanding of fundamental physical principles by placing great emphasis on these principles and how they arose; points out the limits of applicability of the theories and equations of physics; and stresses connections among topics by incorporating many aspects of contemporary physics and astronomy into a mix of traditional topics.

[Bloomsbury Reader in Cultural Approaches to the Study of Religion](#) Meredith Minister 2018-08-23 This is the first reader to gather primary sources from influential theorists of the late 20th and early 21st centuries in one place, presenting the wide-ranging and nuanced theoretical debates occurring in the field of religious studies. Each chapter focuses on a major theorist and contains: · an introduction contextualizing their key ideas · one or two selections representative of the theorist's innovative methodological approach(es) · discussion questions to extend and deepen reader engagement Divided in three sections, the first part includes foundational comparative debates: · Mary Douglas's articulation of purity and impurity · Phyllis Tribble's methods of reading sacred texts · Wendy Doniger's comparative mythology · Catherine Bell's reimagining of religious and secular ritual The second part focuses on methodological particularity: · Alice Walker's use of narrative · Charles Long's critique of Eurocentricism · Caroline Walker Bynum's emphasis on gender and materiality The third section focuses on expanding boundaries: · Gloria Anzaldúa's work on borders and languages · Judith Butler's critique of gender and sex norms · Saba Mahmood's expansion on the critique of colonialism's secularizing demands Reflecting the cultural turn and extending the existing canon, this is the anthology instructors have been waiting for. For further detail on the theorists discussed, please consult *Cultural Approaches to Studying Religion: An Introduction to Theories and Methods*, edited by Sarah J. Bloesch and Meredith Minister.
